The [Behavior Referral](#) is used to report behavior incidents to behavior administrators. Incidents are then reviewed in the [Behavior Management tool](#), where modifications can be made and resolutions assigned. Resolutions can also be assigned in the student [Behavior tab](#). Incidents are made up of Events and Participants linked by time and location. See additional documentation regarding the [Behavior module](#) for more information.

This article describes the Event, Participant and Resolution editors that include state-specific elements used in reporting. The Event and Participant editors are available from both the [Referral](#) and the [Management Tool](#) and the Resolution editor is available from the [Management Tool](#) and the student's [Behavior tab](#). In addition to the localized fields described in this article, some core dropdown lists may include localized options.
