Export Editor | Using the Feeder Data Export

This information is customized for a specific district. For more information on available Custom Development services, contact your Client Executive.

See the following pages for more information:

- Feeder Import Wizard
- Feeder Import Custom Tab
- Feeder Export Custom Tab

PATH: *System Administration > Data Utilities > Feeder Export*

The Feeder Data Export Tool is used to generate a list of students who will be exported to a new district in the next school year. This export can be used by those districts that use Campus at the sending school to gather data for students moving to the receiving school district that is not on Campus. It can also be used by both sending and receiving districts that use Campus.

Export Editor

The Feeder Data Export Editor provides options to generate a list of students based on a previously made Ad hoc Filter or based on the student's current grade level of enrollment. Also available is a Feeder Standard Format which provides the data elements in the same order as is accepted when using the Feeder Import Wizard.
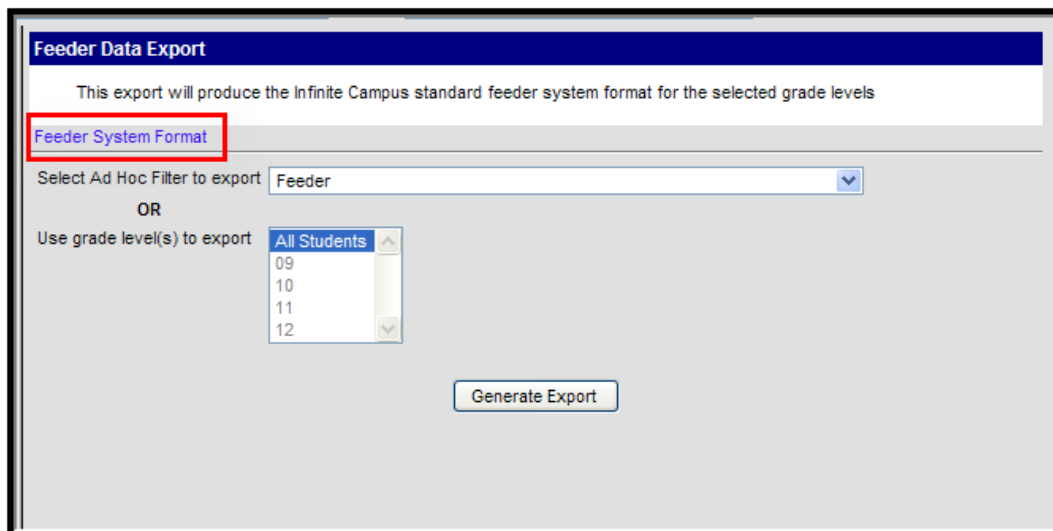

Image 2: Feeder Data Export - System Format

Selecting this option will display a list of fields contained within the data export. This is available for mapping purposes.

Using the Feeder Data Export

1. Select the appropriate **Ad hoc Filter to Export** from the dropdown list.
2. Or, select a specific grade level or all grade levels.
3. Click the **Generate Export** button. A CSV file will appear, listing the selected students.
