

State-Level Data Certification Setup and Workflow

Last Modified on 10/22/2022 9:48 am CDT

[Pre-Data Validation/Certification Setup](#) | [Data Validation Setup Workflow](#) | [Data Certification Setup Workflow](#) | [Approving Data Certification Events](#)

This article explains the general workflow for setting up and using Data Validation and Certification. Select links within each step for detailed information about the tools described throughout the workflow.

Data Integrity Tools are only available in State Editions of Campus and districts connected to a State Edition of Campus.

Pre-Data Validation/Certification Setup

Prior to using Data Validation and Certification, the following must be set up:

- [Ensure Email Messenger is Enabled and Configured](#)
- [Assign Data Integrity Tool Rights](#)
- [Assign Filter Designer Tool Rights](#)
- [Ensure Users Have a Valid Email Address](#)

Ensure Email Messenger is Enabled and Configured

PATH: [System Administration](#) > [Messenger](#) > [Messenger Preferences](#) > [Email Settings](#)

Users must ensure [Email Messenger](#) is enabled and configured for the state. As Data Certification Events and Types are published and approved, state users receive email notifications.

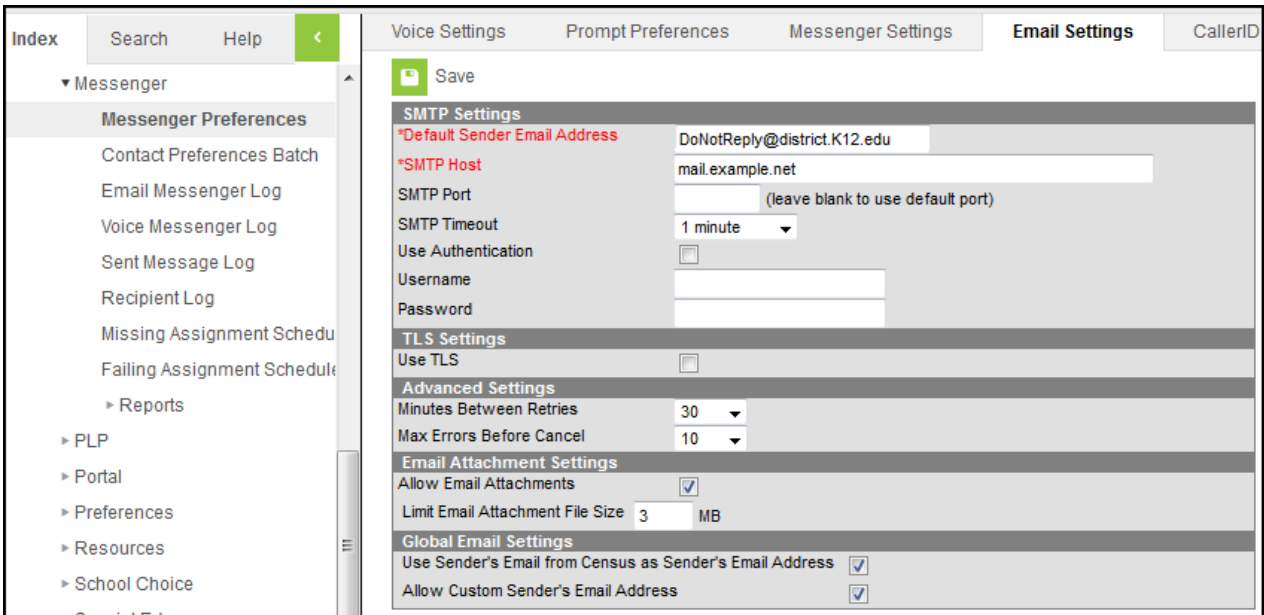

Image 1: Email Messenger Settings

Assign Data Integrity Tool Rights

PATH: *System Administration > User Security > Users > Tool Rights*

For state users to properly set up, view and approve events, they must be given tool rights to the appropriate Data Integrity Tools (Image 2). See the [Data Integrity Tool Rights](#) page for more information.

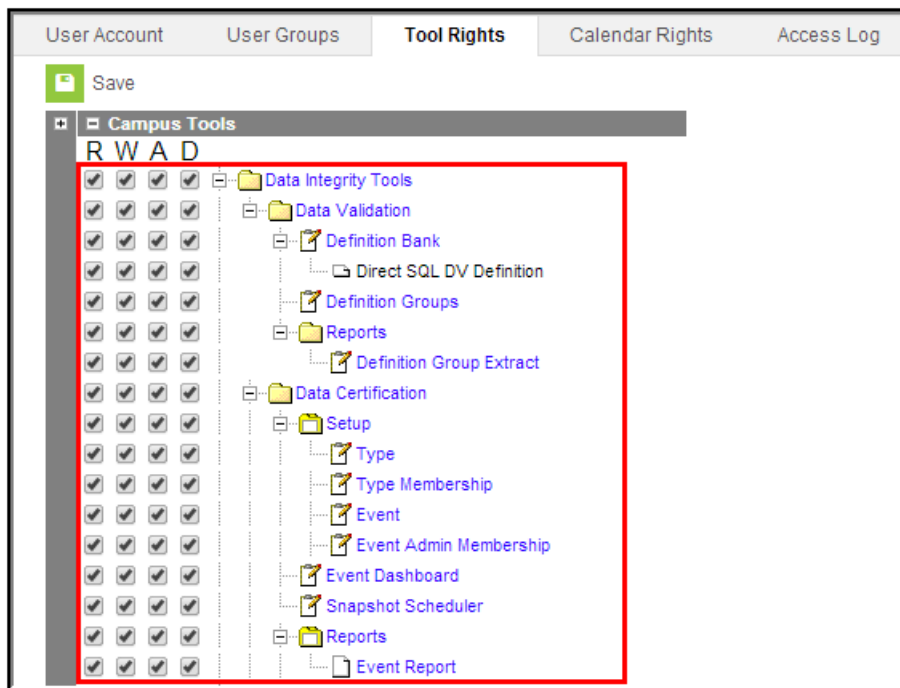

Image 2: Data Integrity Tool Rights

Assign Filter Designer Tool Rights

PATH: *System Administration > User Security > Users > Tool Rights*

To create Ad Hoc filters used in an event for pulling a defined set of data, users must have tool rights to the [Filter Designer](#) and related sub-rights (Image 3).

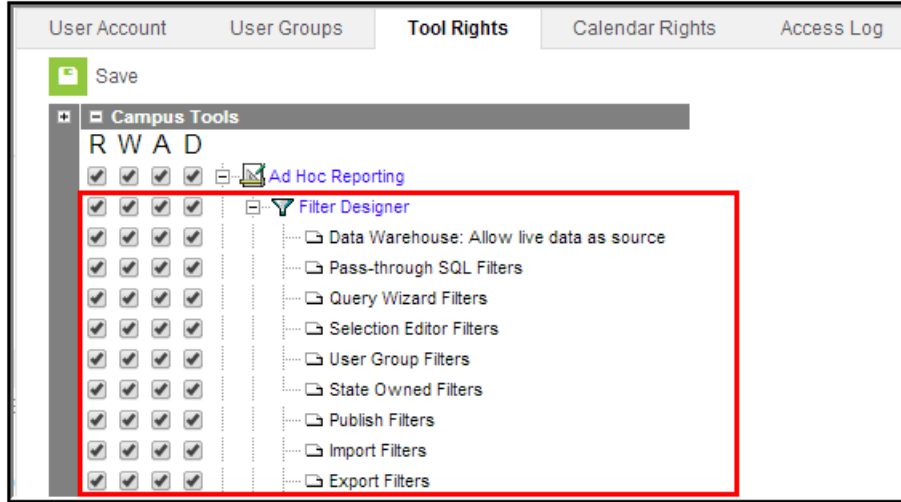

Image 3: Ad Hoc Reporting Tool Rights

Ensure Users Have a Valid Email Address

PATH: *Census > People > Demographics > Email*

For users to receive email notification about data certification event activity, they must have a valid email address entered on the Demographics tab.

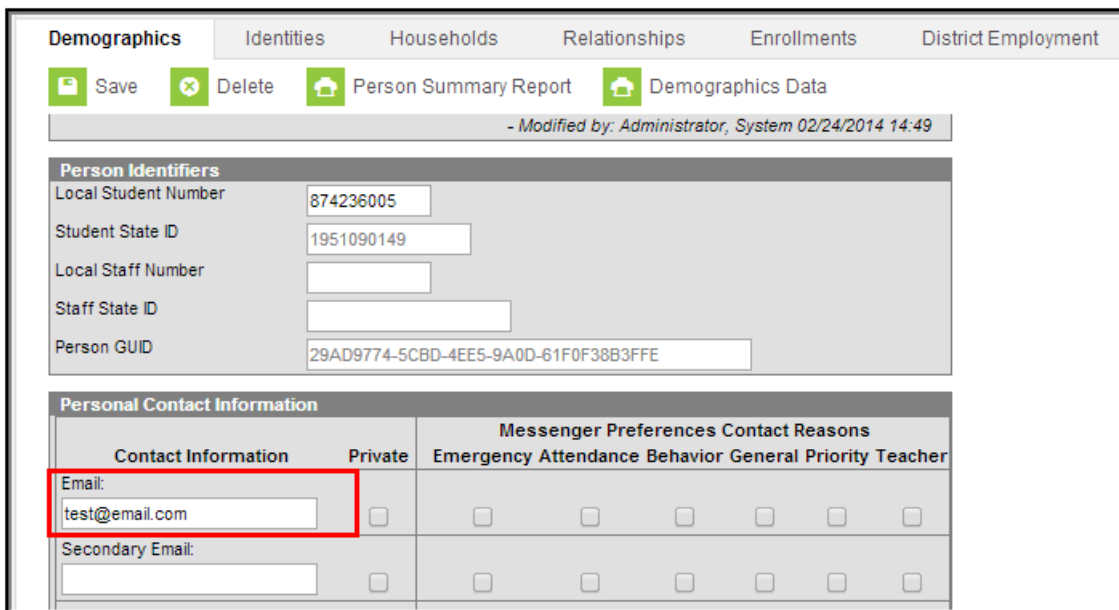

Image 4: Email Address Field

Data Validation Setup Workflow

The following steps define the basic workflow for setting up Data Validation tools so that users can begin to validate state and district data.

- [Step 1. Establish Data Validation Definitions](#)
- [Step 2. Create Data Validation Groups](#)
- [Step 3. Review Data Validation Groups](#)
- [Step 4. Publish Data Validation Groups to Districts](#)

Step 1. Establish Data Validation Definitions

PATH: [Data Integrity Tools](#) > [Data Validation](#) > [Definition Bank](#)

For state and district users to validate data, data validation definitions need to be established. [Data validation definitions](#) define how data is audited during the validation process. Users can create their own validation rules and/or use the preexisting rules provided by Campus.

Archiving a definition makes it unavailable for use in data validation groups; however, the definition can still be used to preview data and existing data validation groups containing the definition can still be run. Archived definitions can be reactivated for use in data validation groups.

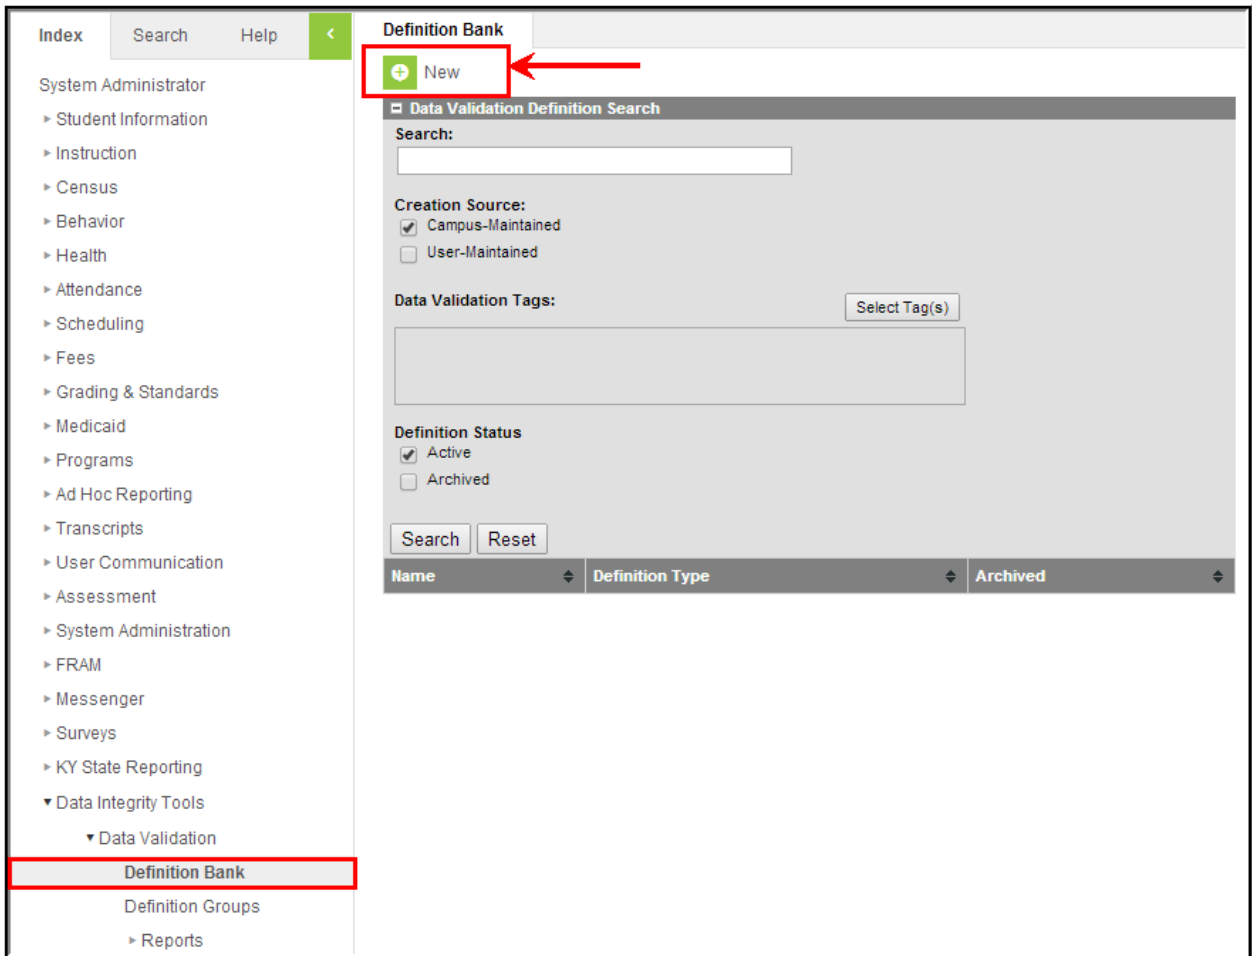

Image 5: Establishing Data Validation Definitions

Step 2. Create Data Validation Groups

PATH: *Data Integrity Tools > Data Validation > Data Validation Groups*

Once data validation definitions have been created, [data validation groups](#) need to be established. Data validation groups are sets of validation definitions grouped together so users can easily audit data for a specific area or process within Campus. Users can add user-created and Campus-created definitions to validation groups.

For example, a user might create a validation group called "Student Graduation Validations" and include several validation definitions pertaining to graduation information.

Archiving a group makes it unavailable for use in Data Certification, however the definition can still be used to preview data and existing data validation groups containing the definition can still be run. Archived groups can be reactivated for use in Data Certification.

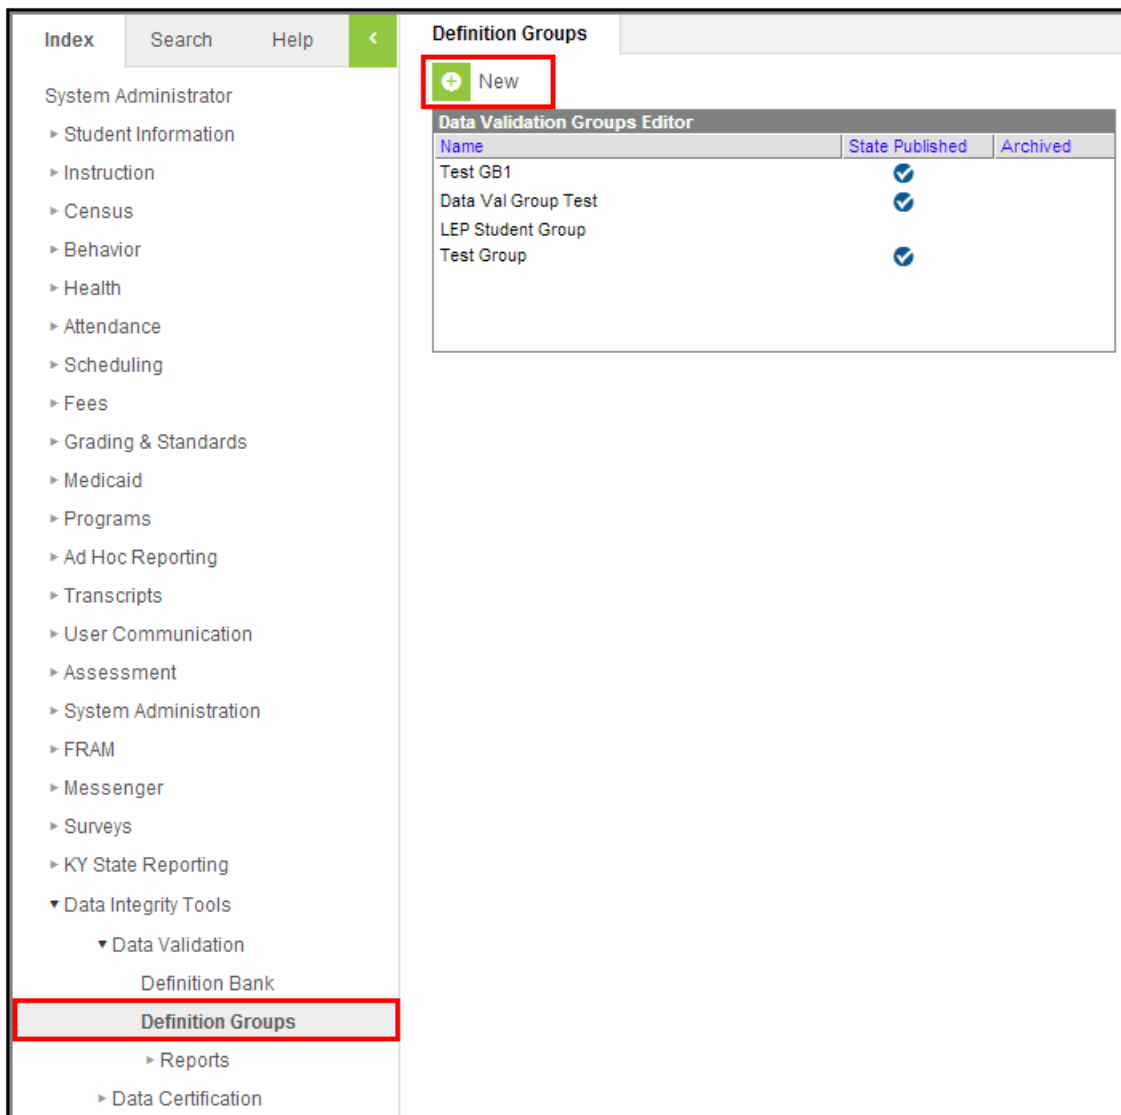

Image 6: Creating Data Validation Groups

Step 3. Review Data Validation Groups

PATH: *Data Integrity Tools > Data Validation > Reports > Definition Group Extract*

Once data validation groups are created, users should run each validation group and review reported data via the [Definition Group Extract](#) tool.

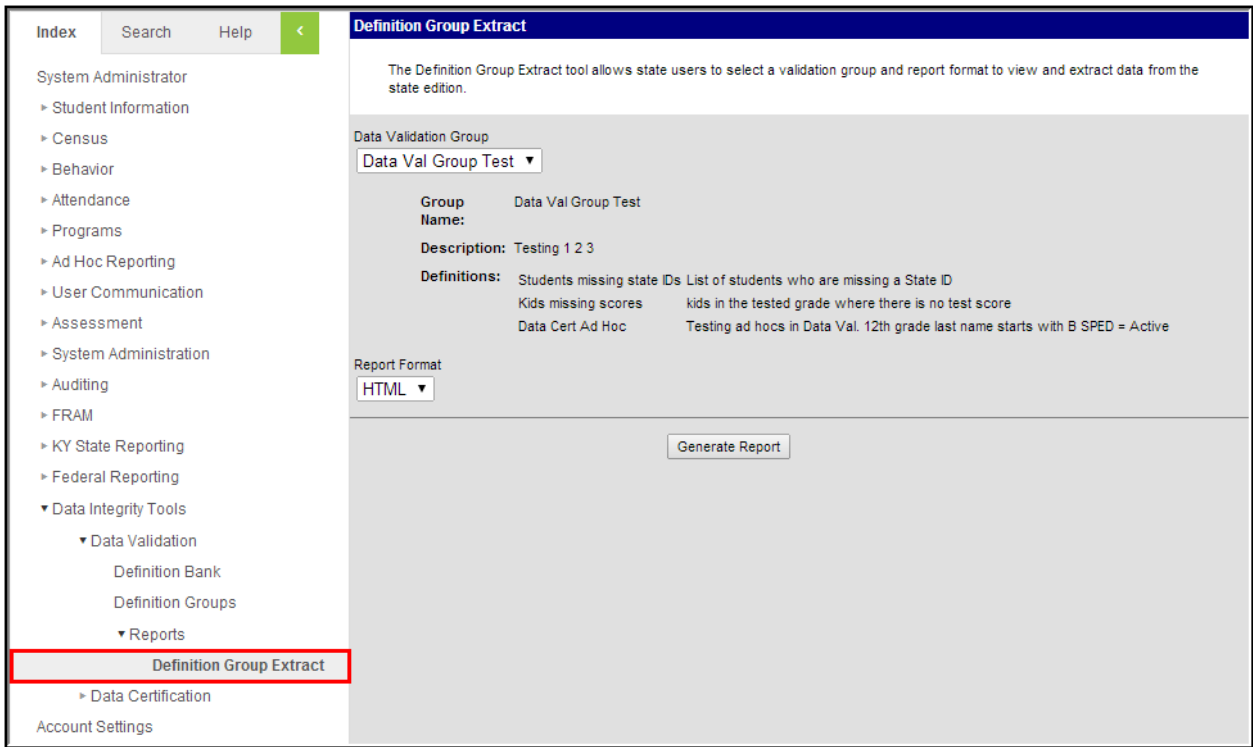

Image 7: Reviewing Data Validation Groups

Step 4. Publish Data Validation Groups to Districts

PATH: *Data Integrity Tools > Data Validation > Definition Groups*

Once data validation groups are established, users need to publish these groups to districts so district users can begin using them for validation. To publish a validation group, select the group from the [Data Validation Groups Editor](#) window and click the **Publish Group** button (see image below).

An archived group that has never been published cannot be published to districts.

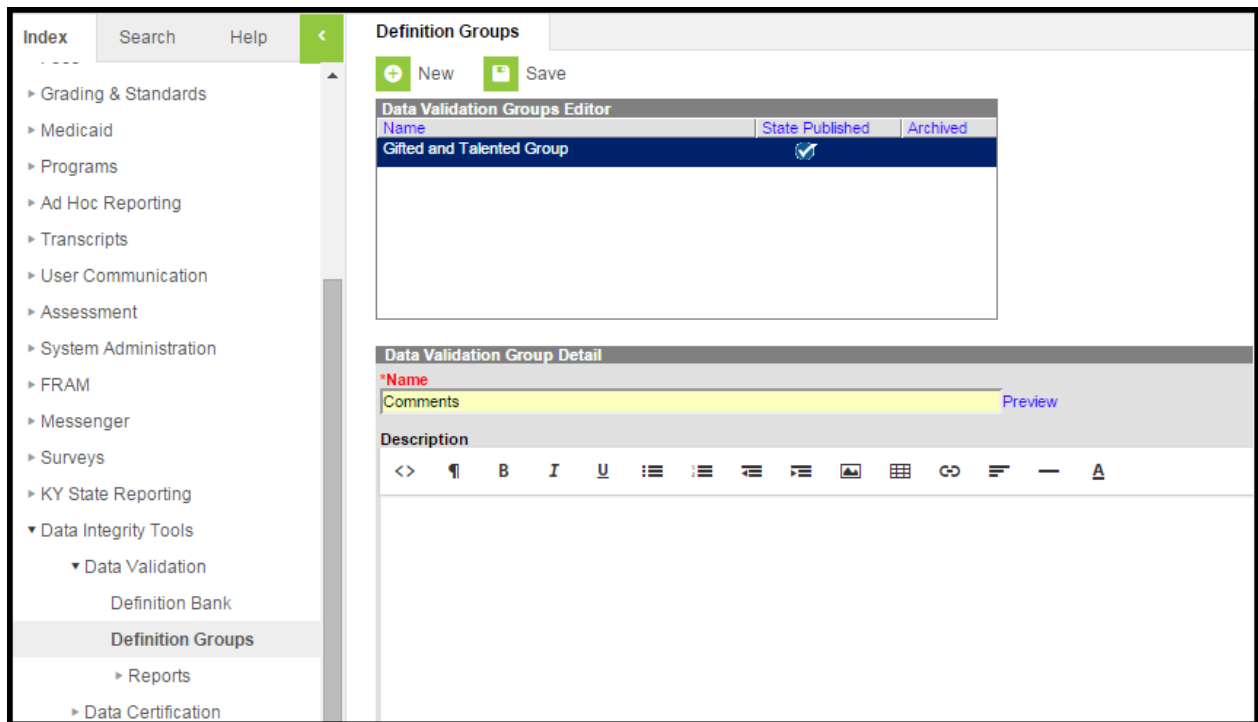

Image 8: Publishing Data Validation Groups

Data Certification Setup Workflow

The following steps describe the basic workflow for setting up Data Certification tools so that users can begin to create and approve data certification events.

- [Step 1. Create Certification Types](#)
- [Step 2. Publish Certification Types to Districts](#)
- [Step 3. Add Members to Each Certification Type](#)
- [Step 4. Create Data Certification Events](#)
- [Step 5. Assign Event Admin Memberships](#)
- [Step 6. Publish Data Certification Events to Districts](#)
- [Step 7. Schedule a Snapshot](#)

Step 1. Create Certification Types

PATH: [Data Integrity Tools](#) > [Data Certification](#) > [Setup](#) > [Type](#)

Before events can be created, data certification [Types](#) must be created. Data certification types indicate what type(s) of information is being certified in the data certification event (i.e., Special Ed, English Learners (EL), etc) and which state and district users are allowed to view and certify an event.

Image 9: Creating Data Certification Types

Step 2. Publish Certification Types to Districts

PATH: *Data Integrity Tools > Data Certification > Setup > Type*

Once data certification types have been created they must be published to districts via the Publish to Districts button (Image 10). Publishing data certification types allows district users to be assigned to type memberships and ensures the appropriate district users are allowed to certify events based on the type of data certification event.

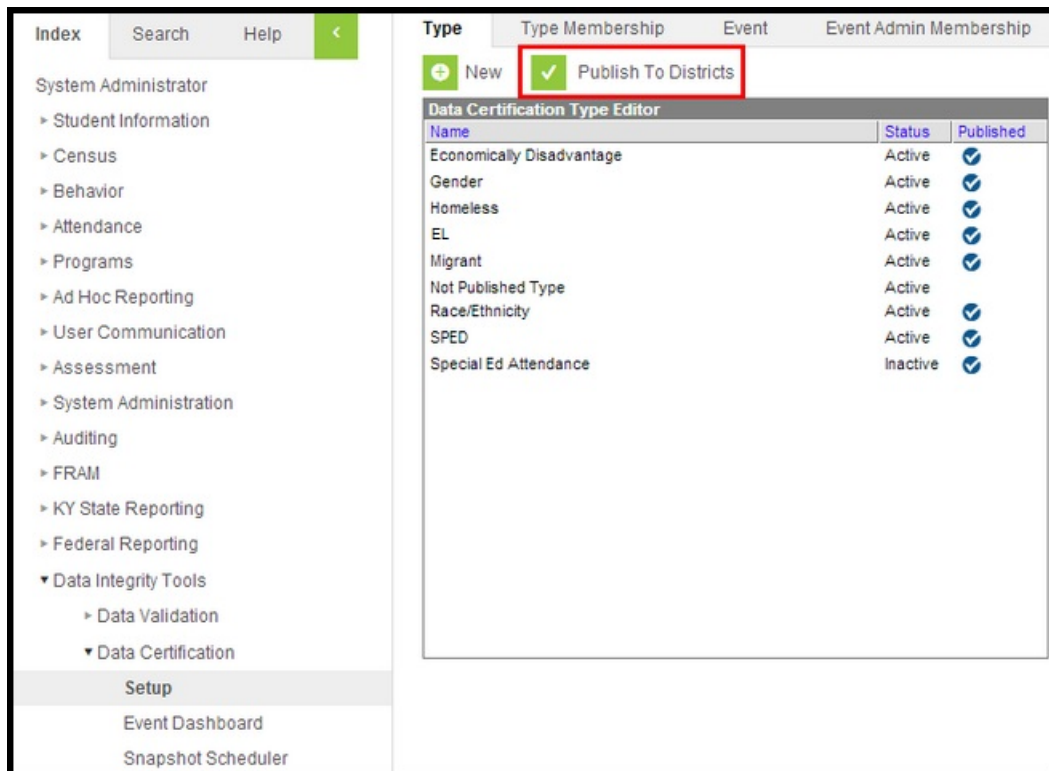

Image 10: Publishing Data Certification Types

Step 3. Add Members to Each Certification Type

PATH: *Data Integrity Tools > Data Certification > Setup > Type Membership*

Once Types have been created and published, state users must be assigned [Type Memberships](#) for each available type. As data certification events are created and published to districts, state users receive notification of published events and have the ability to certify events tied to their Type Membership(s).

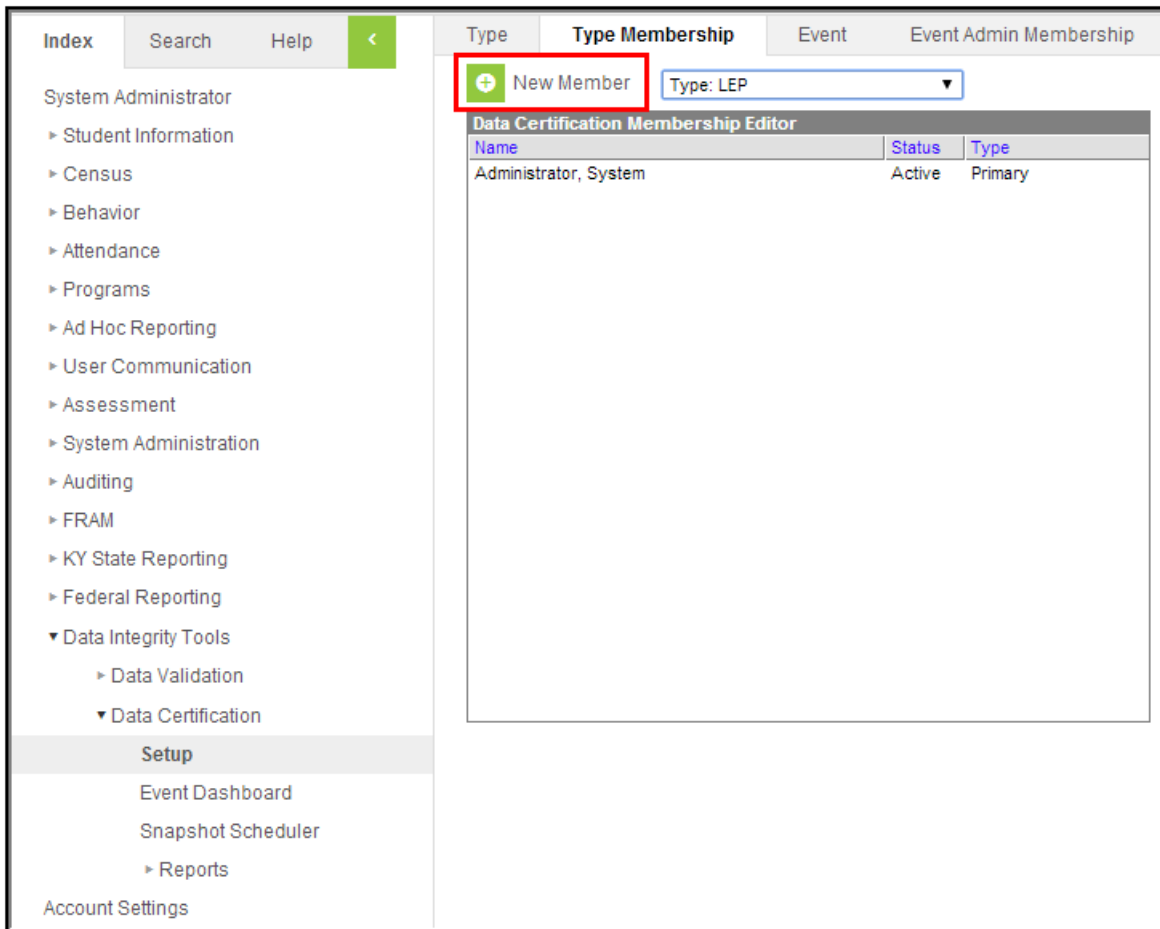

Image 11: Assigning Type Memberships

Step 4. Create Data Certification Events

PATH: *Data Integrity Tools > Data Certification > Setup > Event*

Once [Types](#) are created and published and [Type Memberships](#) are assigned, data certification events can be created via the [Events](#) tool.

Do not publish events until [Event Admin Memberships](#) are assigned. Only event admins can view unpublished and closed events.

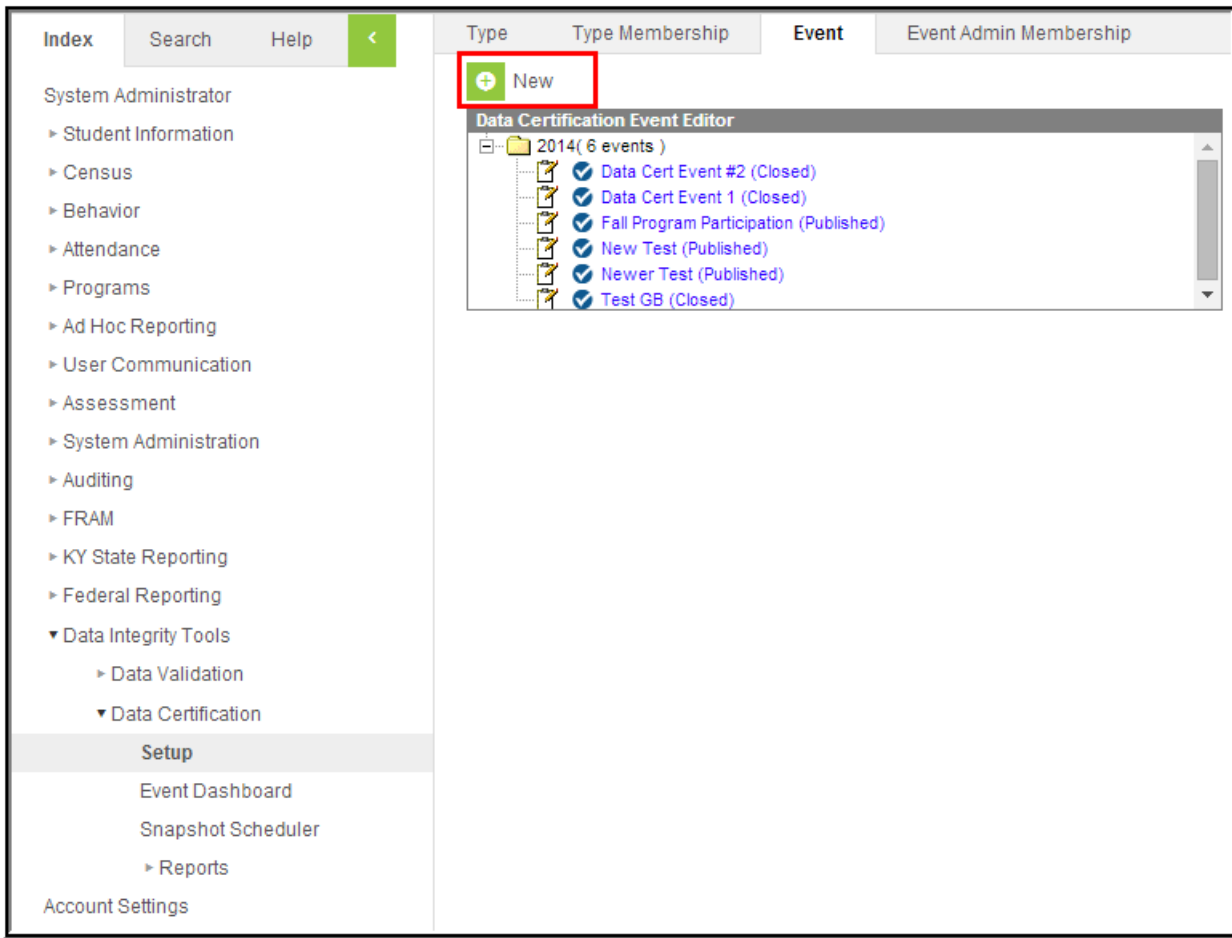

Image 12: Creating a Data Certification Event

Step 5. Assign Event Admin Memberships

PATH: *Data Integrity Tools > Data Certification > Setup > Event Admin Membership*

Once [Events](#) are created, [Event Admin Memberships](#) must be assigned. Event Admins are those users who are responsible for reviewing state and district certified events before the event is considered complete and closed.

Unlike Type Memberships, Event Admin Memberships are event-specific, meaning regardless of the user's Type Membership(s) and the Data Certification Type values entered on the event, event admins can view, process and close any and all events in which they have memberships.

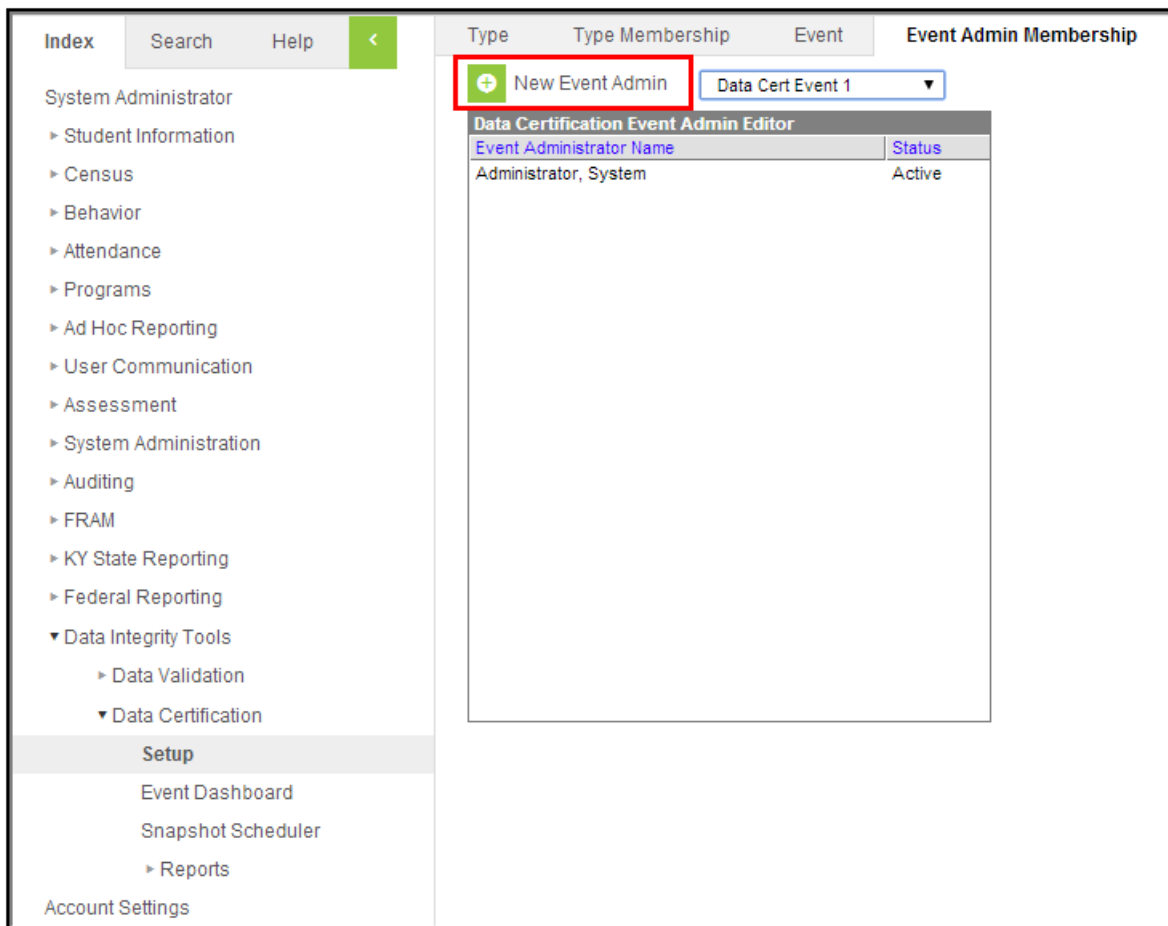

Image 13: Assigning Event Admin Memberships

Step 6. Publish Data Certification Events to Districts

PATH: *Data Integrity Tools > Data Certification > Setup > Events*

Once Event Admin Memberships are assigned, events should be published to districts via the **Publish to Districts** button on the [Event tab](#) (Image 14). Once an event is published, districts can view and certify the event.

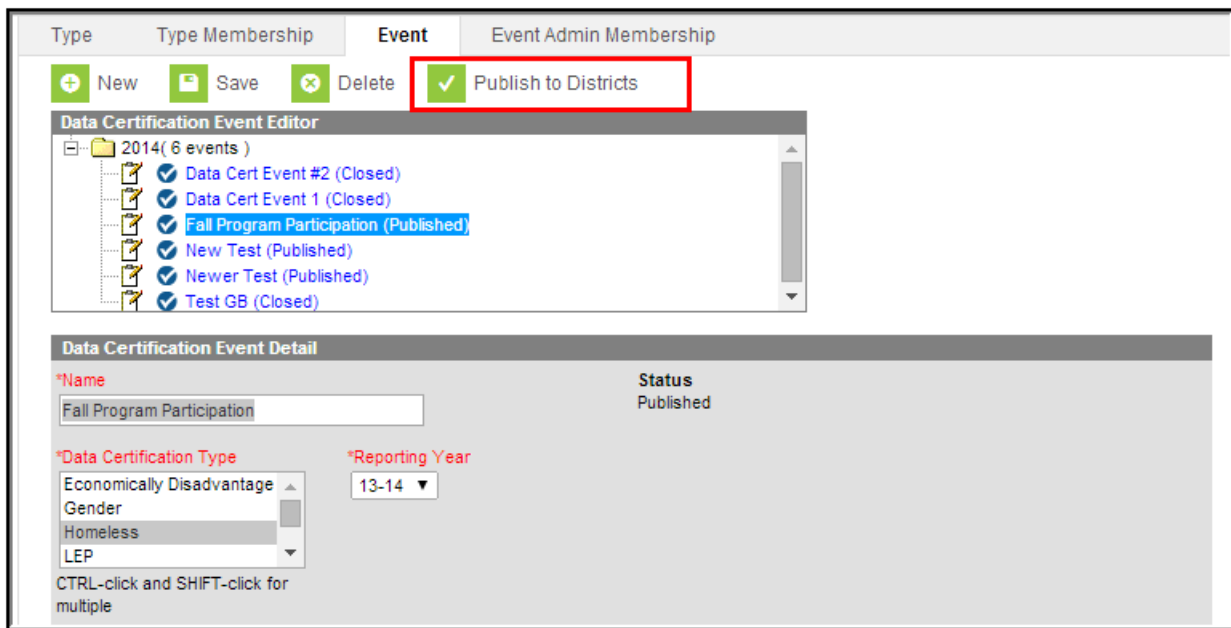

Image 14: Publishing Data Certification Events

Step 7. Schedule a Snapshot

PATH: *Data Integrity Tools > Data Certification > Snapshot Scheduler*

If Snapshot functionality is enabled, a [snapshot needs to be taken](#) or scheduled. Daily recurring snapshots will always overwrite the previous snapshot for a district until the district certifies the event.

Snapshot functionality is manually enabled by Campus and requires a setup fee. Please contact Infinite Campus for more information.

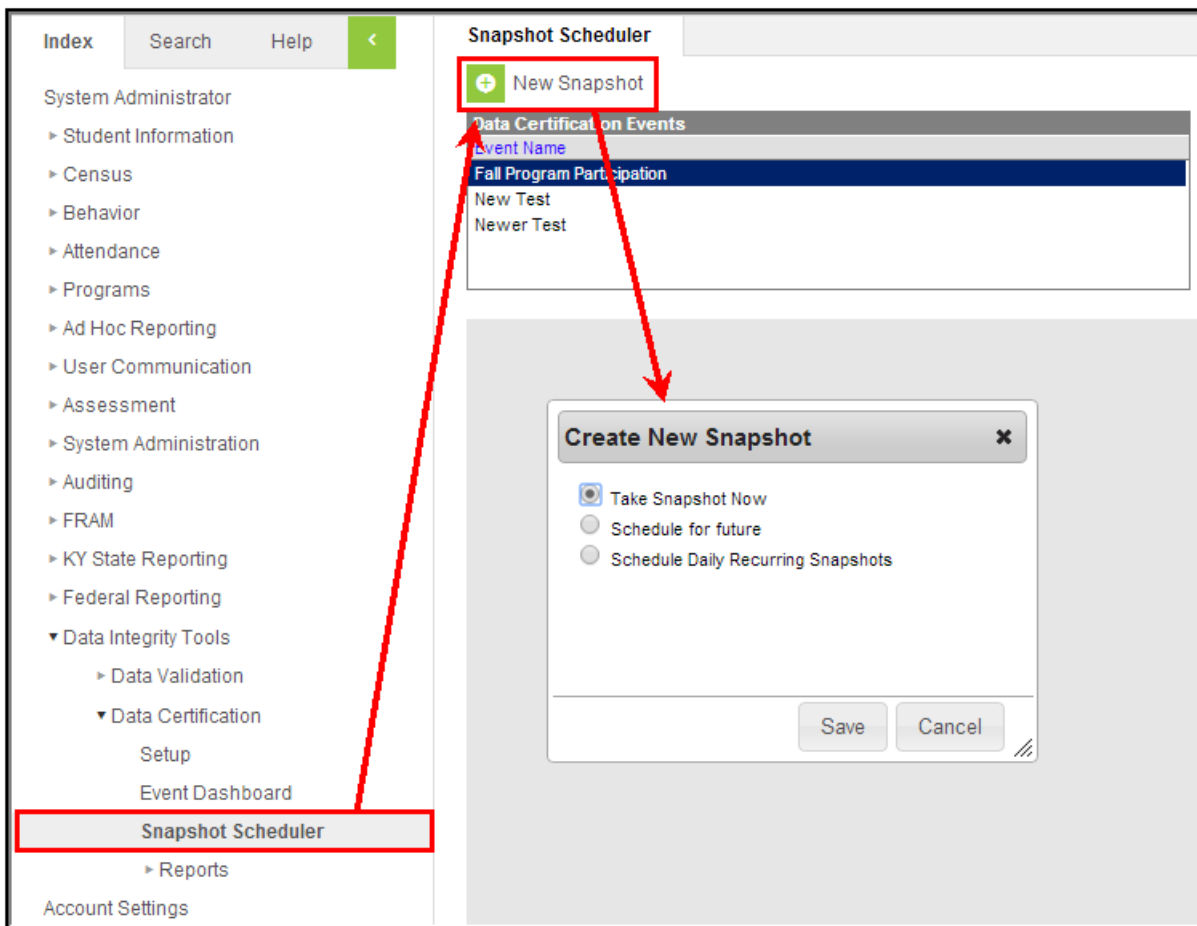

Image 15: Scheduling a Snapshot

Approving Data Certification Events

Now that Data Certification tools are properly set up and data certification events are published to districts, state users must approve data certification events certified and submitted by districts. The following describes the basic workflow involved in viewing and certifying data certification events.

- [Step 1. Review Snapshot Data in the Event Dashboard](#)
- [Step 2. Run the Event Report](#)
- [Step 3. Approve or Request Recertification of Events](#)
- [Step 4. Close Events](#)

Step 1. Review Snapshot Data in the Event Dashboard

PATH: *Data Integrity Tools > Data Certification > Event Dashboard*

If snapshots were taken for the event, you should review the state-wide snapshot, as well as each district's snapshot while keeping in mind their current status (see Image 16).

If snapshot functionality is not enabled, move on to Step 2.

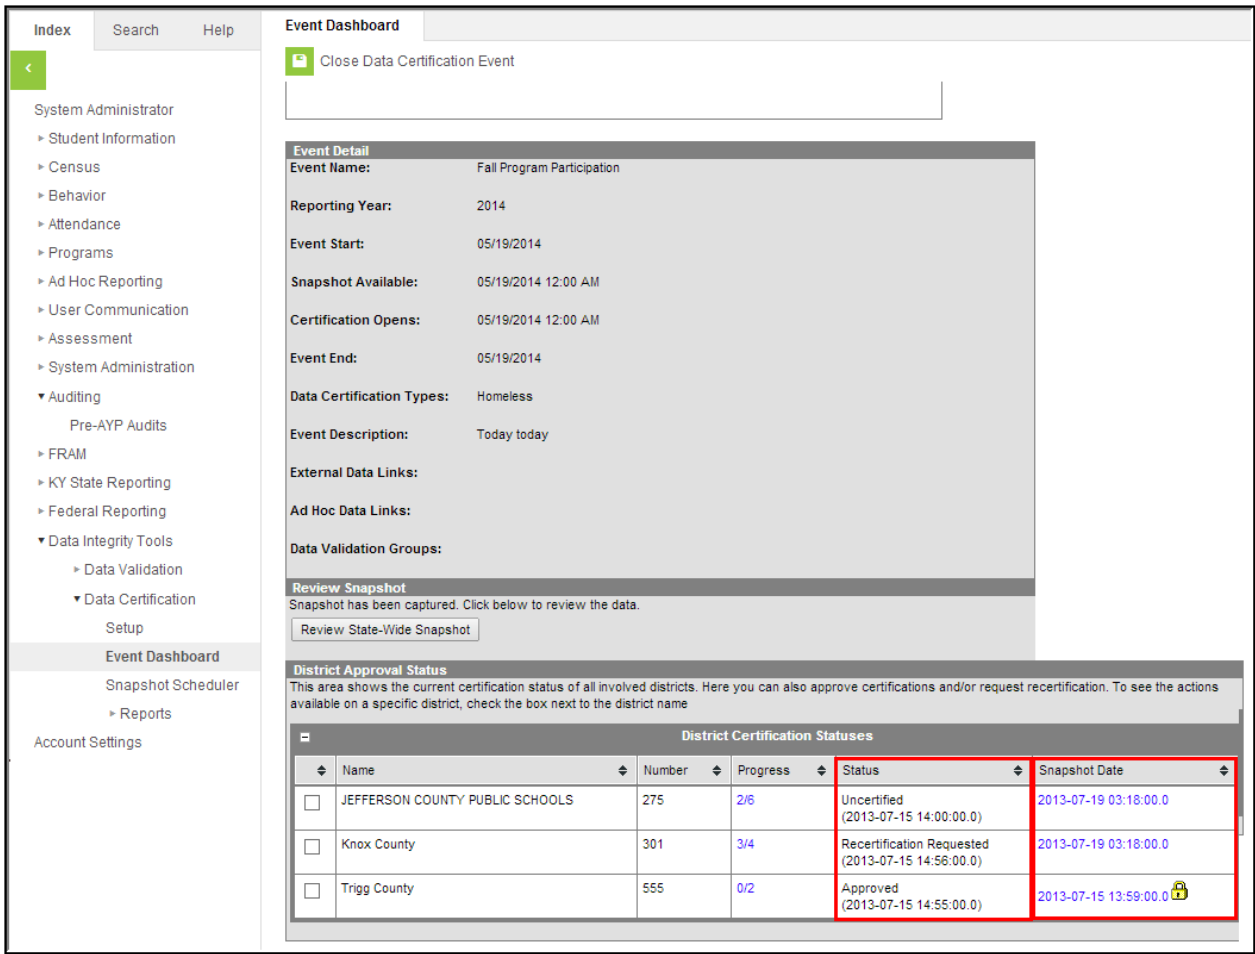

Image 16: Reviewing District Statuses and Snapshot Data

Step 2. Run the Event Report

PATH: *Data Integrity Tools > Data Certification > Reports > Event Report*

To do a general review of the event status per district, school year and event, generate the [Event Report](#). This report will help you understand specifically which districts are ready to be approved.

For example, you could run the report for districts with a status of Certified for a particular event.

This step is considered informative and is not required in order to approve events. Events can also be reviewed within the [Event Dashboard](#).

Data Certification Event Report Options

This report includes event status and user/membership details for the selected data certification event.

Report Options

School Year: 13-14

Data Certification Event Name: Fall Program Participation

District Event Status: Published

Include Secondary Users

Generate Report

Select district(s) to include in the report

- All Districts
- JEFFERSON COUNTY PUBLIC SCHOOLS (275)
- Knox County (301)
- Trigg County (555)

CTRL-click or SHIFT-click for multiple

Image 17: Event Report

Data Certification Event Report

Event Name: Child Verification

Start Date: 10/05/2010

Effective Date: 10/01/2010

Data Certification Type(s): FRAM (Meal Status), Race, Special Education (IDEA)

End Date/Due Date: 05/06/2011

Snapshot Date: 10/04/2010

State Event Status: Published

Generated on 08/09/2012 11:53:41 AM
Page 1 of 1

STATE DETAIL

Event Administrator Name	Name	Type	Approved	Data Certification Type
[Redacted], Don				
	[Redacted], Luke	Primary	-	Race
	[Redacted], Jodi	Primary	07/31/2012 15:36	Race
	[Redacted], Teresa	Primary	-	Special Education (IDEA)
	[Redacted], Kim	Primary	-	FRAM (Meal Status)
	[Redacted], Nicole	Primary	-	Race
	[Redacted], Sherri	Primary	-	Special Education (IDEA)
	[Redacted], Jodi	Secondary	N/A	FRAM (Meal Status)
	[Redacted], Darla	Secondary	N/A	Race
	[Redacted], Nicole	Secondary	N/A	Special Education (IDEA)

Image 18: Example of the Event Report

Step 3. Approve or Request Recertification of Events

PATH: *Data Integrity Tools > Data Certification > Event Dashboard*

After the state has reviewed districts who have certified an event and deems them ready for state approval, each district must be selected and approved via the Approve Certification button in the [Event Dashboard](#) tool (Image 19).

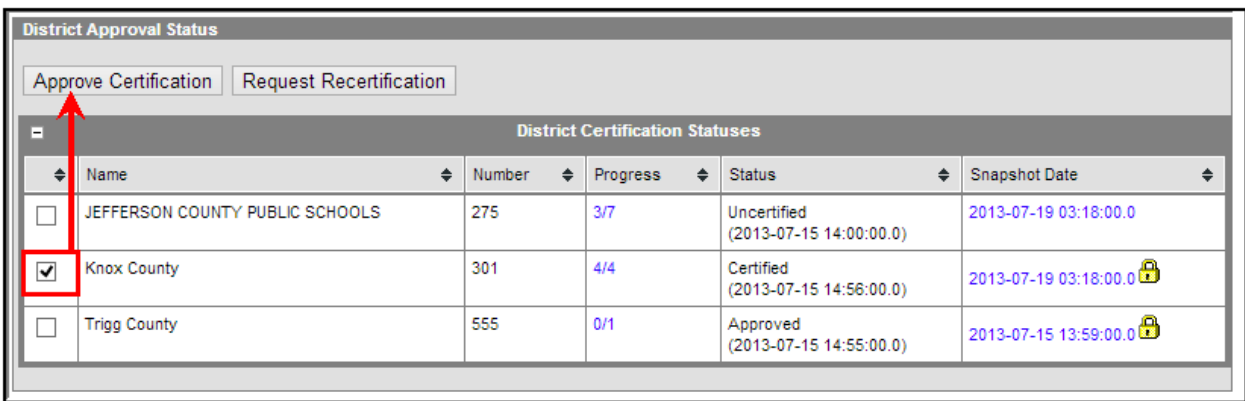

Image 19: Approving Districts for an Event

If the state disagrees with a district's certification for an event, the state can request re-certification of the data via the **Request Recertification** button in the [Event Dashboard](#) tool (Image 20).

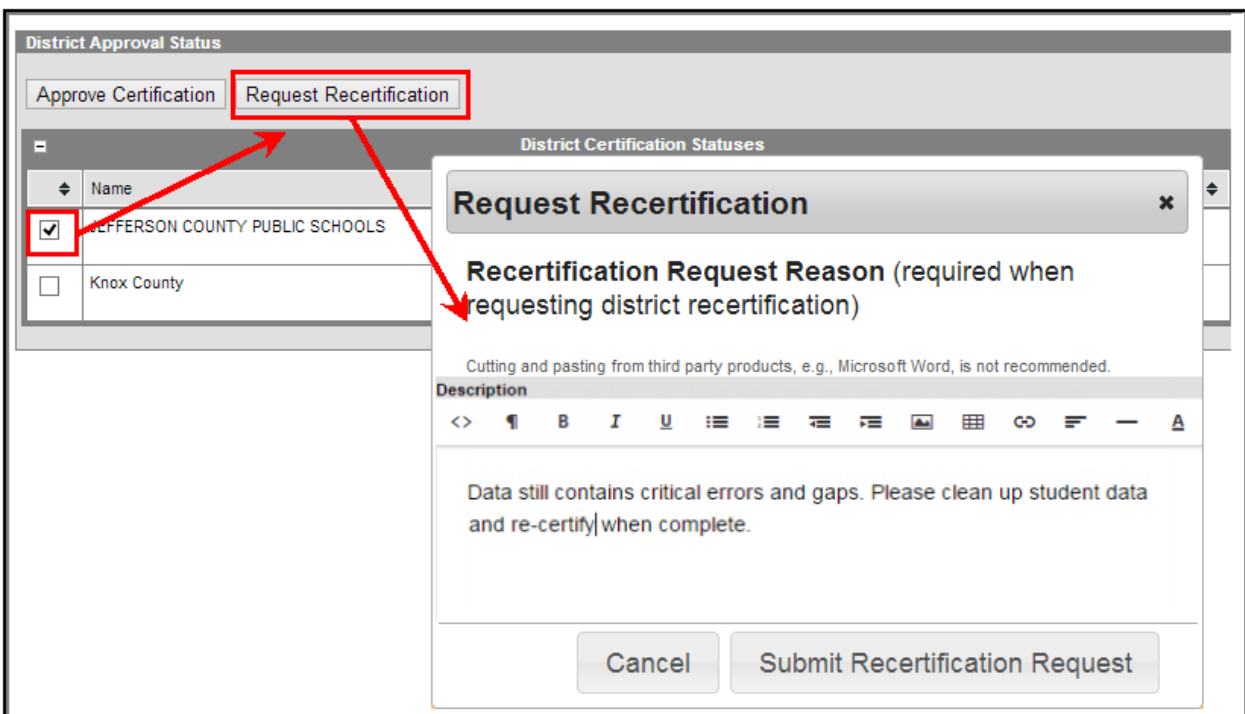

Image 20: Requesting Recertification of an Event

Step 4. Close Events

PATH: *Data Integrity Tools > Data Certification > Event Dashboard*

Once all districts have certified their data for an event and each district has been approved, the event should be closed via the [Event Dashboard](#) tool (see Image 21).

Select the event from the Event Administration Editor and click the **Close Data Certification Event** button.

The screenshot displays the 'Event Dashboard' interface. At the top, a button labeled 'Close Data Certification Event' is highlighted with a red box. Below it is the 'Event Administration Editor' table, which lists several events. The 'LEP Test Event' is selected and highlighted in blue. Below the table is the 'Event Detail' section, which provides information about the selected event, including its name, reporting year, start and end dates, and certification types. A red box highlights the 'Event End' date, '07/19/2013'. Below this is the 'Review Snapshot' section, which indicates that a snapshot has been captured and provides a button to 'Review State-Wide Snapshot'. At the bottom is the 'District Approval Status' section, which shows a table of district certification statuses. A red box highlights the 'Status' column for the two districts listed: 'JEFFERSON COUNTY PUBLIC SCHOOLS' and 'Knox County', both of which are marked as 'Approved'. Two red text boxes with arrows provide context: one points to the 'Close Data Certification Event' button, stating 'Once the state has decided the event is over it should be closed.', and another points to the 'Event End' date, stating 'Typically this would occur once the certification window has ended and/or all districts have been approved.'

Event Name	Due Date	Status
Snapshot test event 1 7192013	07/31/2013	In Progress
72213 test	07/31/2013	In Progress
