Classic View: Data Integrity Tools > Data Validation > Stored Procedure Setup

Search Terms: Stored Procedure Setup

The Stored Procedure Setup tool is used to create and manage procedures used within Validation Rules and to report data within Data Validation Report. Procedures are specific parameters used for filtering and reporting specific data.

Accessibility

Full Access is available to State Editions and District Editions that have licensed the Data Analytics Suite. Restricted Access is available to all other District Editions.

Restricted Access

By default, all District Edition customers will have full access to the Data Validation Report but restricted access to the following Data Validation admin tools:

- Stored Procedure Setup
- Validation Rules
- Validation Groups

Customers with restricted access are only able to tag Validation Rules and assign Tool Right User Groups to Validation Groups, the latter of which controls Validation Group availability for reporting in the Data Validation Report editor. Validation Rules and Validation Groups will only be available directly from Infinite Campus or State Edition via DIS publishing.
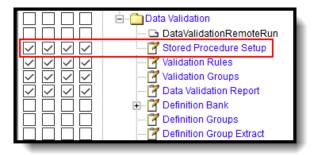

Full Access

Full access to the Data Validation admin tools, which allows for local indexing of Stored Procedures and creation/maintenance of Validation Rules and Groups, is only available through the purchase of one of the Data Analytics Suite.

Full access is limited to Data Validation admin tool items created in the local database. For example, District Edition customers have full access to District-owned Validation Rules created locally but restricted access to System-owned Validation Rules delivered by Infinite Campus.

Tool Rights

The following table describes how tool rights work for the Stored Procedure Setup:

| Tool	R	W	A	D
Stored Procedure Setup	Users are able to view stored procedures.	Users are able to edit existing stored procedures.	Users are able to create stored procedures.	Users are able to delete stored procedures.

Creating a Stored Procedure

The Stored Procedure Setup tool can be used to create and edit procedures that can be used in Validation Rules.

> Stored procedures created within the 'cust' database schema must be mapped before they can

be used in the Data Validation tools. Only one mapping may be created per stored procedure.

Validation Procedure Detail Editor

Field	Description
Procedure	Name of the procedure.
Display Name	The name of the procedure that will be displayed in the Validation Rules tool.
Hidden	The procedure will not be available for selection within the Validation Rules tool.
Description	The description of the procedure.
Parameters	The parameters of the procedure. The help text that will display in the Data Validation Rule Detail is what is set.
Save & Stay	Saves the procedure and stays on the current screen. Once saved, the preocedure is available for selection for Validation Rules.
Cancel	Returns the user to the Validation Procedures main page.
Delete	Deletes the selected procedure and returns the user to the Validation Procedures main page.

To create a new Stored Procedure:

1. Select **New**.
2. Enter a **Procedure** and Display Name.
3. Enter a **Description** for the procedure.
4. Enter the **Help Text** that displays in the Validation Rule Detail.
5. Select **Save & Stay**. The procedure is available for selection for Validation Rules.
