

Fees Filter Fields for Ad hoc Reporting

Last Modified on 10/22/2022 9:48 am CDT

The Ad hoc Reporting tools allow you to create custom queries and reports on various types of information stored within the Campus database. Reports may be used for data analysis and state reporting and queries may be exported out of Campus or used to create filters for standard reports. Custom filters and reports are built by adding elements from Ad hoc Reporting tools like the [Filter Designer](#) and the Letter Designer.
