This article is continually updated as new information becomes available.

Before You Begin

The POS 2.0 installation is a "per-user" installation instead of a "per-machine" installation like it was in POS 1.0. We made this change so that approval from a Windows administrator is not required to install future updates.

Previously, in POS 1.0, cashiers were required to provide an administrator's username and password during the Point of Sale's automatic update process. The new "per-user" installation and updates no longer require admin approval. This means a POS cashier won't be prompted for an admin username and password after an automatic update is downloaded. Instead, the update installs silently between closing and opening POS 2.0 on the terminal.

Data configured in the POS Terminal Admin is shared between users on the same terminal. The first user to install POS 2.0 on the terminal must use the POS Terminal Admin to set specific options and load data onto the terminal. Subsequent users do not need to use the POS Terminal Admin to change options or reload data after installing. Any changes made in the POS Terminal Admin will affect all users on the terminal.

What can I do?	What do I need to know?

Install a POS 2.0 Terminal

1. Navigate to your Infinite Campus logon page and copy the URL for use in the Campus

Login URL field on the POS Terminal Admin. The POS Terminal Admin will be available after you complete the terminal installation steps.

- 2. Log onto Campus and navigate to *Point of Sale/Food Service > Administration > Terminals*.
- 3. Select a unique POS 2.0 terminal.
- 4. Click the Install Terminal Enhanced button.

Result: Campus downloads the Campus Point of Sale Setup 2.x.x file to your terminal.

Open the Campus Point of Sale Setup 2.x.x.exe file.

Result: The POS Terminal Admin screen displays.

If a "Windows protected your PC" message displays, click *More Info* > *Run Anyway*. If a Windows Defender Firewall message displays, click the *Allow Access* button. You may need to allow POS to run with other firewall or anti-virus software.

Silent Install

 Districts wanting to perform a silent install may add ""/S" to the .exe. file in Command Prompt. This will bypass all prompts, pop-ups and error messaging so they can mass install terminals.

Load POS Data

Field	Description
Data and Pictures	Loads patron/menu data and patron pictures.
Data Only	Only loads patron/menu data.
Pictures Only	Only loads patron pictures.

Find the POS Version on Your Terminal

To find out which version of Point of Sale your terminal is running, open the Campus Point of Sale

tool. The version of Point of Sale that your terminal is running displays in the upper right-hand corner of the login screen.

If you recently re-installed the terminal, the version number will update after you close and reopen the Campus Point of Sale tool.

Laptop and Tablet Display Settings

POS 2.0 was developed with a responsive design. Because of that, POS 2.0 can be used on a standard touch screen terminal, a laptop, a Windows 10 tablet such as a Surface Pro and a Windows 10 8" tablet such as the POS-X lon tablet.

We recommend using the following display settings on these types of terminals. Be sure to validate the application is the correct size on your terminal.

Terminal	Recommended Display Settings
Surface Pro	 Change the size of text, apps, and other items = 100% Resolution = 1024 X 768
POS-X lon Tablet	 Change the size of text, apps, and their items = 100% Resolution = 1280 X 800
	If POS 2.0 does not display correctly on your terminal, you can shrink the size of this page using the Ctrl - feature from the Windows virtual keyboard.

Uninstalling the Terminal

Point of Sale terminal requires the application and the related terminal data. Terminal data is stored in a separate directory and is managed separately.

The terminal software may be uninstalled and then re-installed on the terminal if needed.

Option 1: Uninstall using the Apps & features option in Windows Settings.

Settings		-	×
ය Home	Apps & features		
Find a setting $ ho$	Apps & features		
Apps	Optional features		
IΞ Apps & features	App execution aliases Search, sort, and filter by drive. If you would like to uninstall or move an

Removing Point of Sale Data

Point of Sale/Terminal data should only be removed if the terminal is being decommissioned and will not be used for Campus Food Service or if recommended by Campus Support.

Terminal data includes the database of transactions processed on the terminal, student photos, and messaging queues. This data is stored in a top level directory on the hard drive. Uninstalling the software does not affect these files. If a terminal is being decommissioned, this folder should be deleted.
