Report Logic | Report Editor | Generate the Report

Classic View: Scheduling > Reports > Requests Satisfied
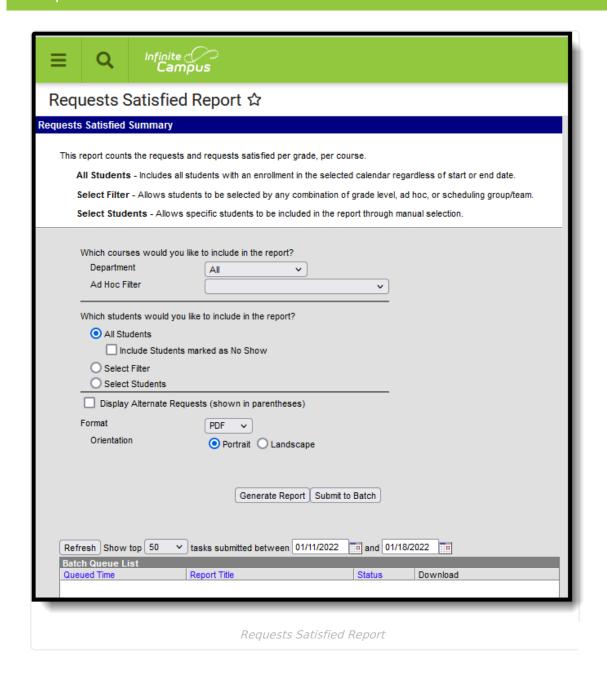

Search Terms: Requests Satisfied

The Request Satisfied report counts the requests made and the requests satisfied per grade, per course.

Information in this report matches the information that appears in the Schedule Wizard. This report can also be generated from the Schedule Wizard.

- When generating the report from Scheduling Reports, the active scheduling trial is used to return roster counts.
- When generating this report from the Schedule Wizard, roster counts are based on the selected trial.

Requests Satisfied Report

Report Logic

Student Course requests are used when planning courses and available sections for the next school year.

This report allows users to see the number of students in each grade level that are scheduled into a roster for a course and how many have requested the course. It displays the Max Students value from the Course editor, the number of sections to build, the number needed to meet the entered requests, how many sections were placed, and the difference between the Needed Sections and the Placed Sections.

When there are no requests or there are no rosters for any course in the selection criteria, the columns on the report display a series of zeros - 0/0 or 0/0(0) when alternate requests are included.

When there are no courses that match the selected criteria - e.g., an empty department or an Ad hoc filter that includes courses that are not in the selected calendar for example - the message 'No Courses match the selection criteria' prints.

Report Editor

The Requests Satisfied Report Editor contains the following options:

Field	Description
Which courses would you like to include in the report?	
Department	Lists the name of the Department assigned to the course that displays on the Courses editor. The report sorts satisfied requests by the selected department name first, then by course number. Only courses assigned to the selected department populate on the report. Courses not assigned a Department are included in a No Department Defined section. Courses that are not linked to a department only display on the report when All Departments is selected from the selection criteria.
Ad hoc Filter	Lists available Course/Section Data Type filters created in the Filter Designer. Only courses included in the filter populate on the report.
Which students would you like to include in the report?	
Schedule Structure	Selection determines from which schedule structure request information is reported. This field only displays when the selected calendar has multiple schedule structures associated with it.
All Students	Reports all course requests entered for any student who has an enrollment in the selected calendar, regardless of enrollment start or end date. When the **Include Students marked as No Show** checkbox is marked, students whose enrollment records have the No Show checkbox marked are also included in the report.

Field	Description
Select Filter	Select from one or more of the following filters: • **Grade(s)** - choose at least one grade level. Only those grade levels included in the selected calendar are available for selection. • **Ad hoc Filter** - select a previously created filter from the Filter Designer. Doing this returns course requests satisfied for only those students included in the filter. The name of the filter is included in the header of the report. Only filters using the **Student Data Type** are available for selection. • **Scheduling Group/Teams** - select at least one Team used for scheduling specific students into specific courses. Only those students assigned to a team are included in the report. No Show students are not included in the report when this option is selected.
Select Students	Use the **Quick Search** option to select students who are actively enrolled or not, in a particular grade level, have a particular last name or first name, and select the Sort Option (by Grade then Name, or alphabetical by Name). Select specific students by choosing their name from the **All Students** list and then clicking the right arrow icon. This moves the student name from the All Students column to the Selected Students column. No Show students are not included in the report when this option is selected.
Alternate Requests	
Display Alternate Requests	When marked, courses requests the student has added as an Alternate Course (in case other course requests cannot be placed) are listed in parentheses on the report. Marking this forces the Orientation of the report to be Landscape for the PDF and DOCX formats; the CSV format can still be printed in Portrait orientation, if desired. When NOT marked, only Required and Elected course requests are listed on the report.
Format and Report Generation	

Field	Description
Format	The report can be generated in PDF, CSV or DOCX. • When generating in PDF or DOCX, select the page layout as **Portrait** setting (typically 8.5 in. by 11 in.), or **Landscape** setting (typically 11 in. by 8.5 in). • When generating in CSV format, the rosters and request columns display separately for each grade level available in that calendar. Note that when including alternate requests (the **Display Alternate Requests** checkbox is marked), the report automatically selects the Landscape option for the PDF and DOCX formats.
Report Generation	Use the **Generate Report** button to display the results of the report instantly. Use the **Submit to Batch** option to choose when the report generates. This option is recommended when generating the report for a large number of students.

Generate the Report

1. Select which courses to include on the report by choosing an option from the **Department** and/or **Ad hoc Filter** lists.
2. Select which students to include in the report by choosing either **All Students** and whether to **Include Students Marked as No Shows**, by selecting a **Filter**, or by selecting specific **Students**.
3. Determine if alternate requests should be included by marking the **Display Alternate Requests** checkbox.
4. Select the desired **Format**.
5. Click **Generate Report** to generate the report immediately, or use the **Submit to Batch** to choose when a report generates.

The report shows the total number of students scheduled versus the total number of requests for the course by grade level. In addition, the report displays the maximum number of section needed, number of sections placed and how many more (if necessary) are needed.
