

# Custom Tab

Last Modified on 10/22/2022 10:07 am CDT

[Custom Tab Functionality | Custom Tabs Tool vs. Attribute/Dictionary](#)

**PATH:** *System Administration > Custom > Custom Tab*

The Custom Tab editor allows a district/state to define custom data objects for tracking local or state-level information. Custom data objects will display in the interface as new custom tabs. When created, custom tabs are district-wide, but information can be displayed/hidden from users through the assignment of user tool rights.

*Custom Tab Tool*

## Custom Tab Functionality

Custom tabs can be used to create a new tab in the following areas of the user interface:

- General (Student Information)
- People (Census)
- Academic Planning
- Medicaid
- LEP
- Custom Programs
- District Information
- Special Education (Student Information)
- PLP (Student Information)
- Counseling (Student Information)
- Health (Student Information)

- Response to Intervention General
- School

Custom Tab functionality varies depending on the Infinite Campus Editor. The following is available:

- [Custom Tab for District Edition Users](#)
- [Custom Tab for State Edition Users](#)

Information on a custom tab should NOT already have a designated area in the Campus product. As a best practice, Campus recommends a thorough review of existing Campus functionality and schema and contact with a Campus Support Representative before creating custom tabs.

Custom tabs are stored in the *campusTool* table of the Campus database.

## Custom Tabs Tool vs. Attribute/Dictionary

The [Custom Tab](#) tool allows a district/state to create and manage its own localized, custom tabs.

The purpose of the [Attribute Dictionary](#) tool is to view all elements that have been customized for a district/state in addition to core elements. Locally created elements (by a system administrator per the [Custom Tab](#) and [Custom Attribute](#) tools) can be viewed and modified in the [Custom Attribute](#) tool.
