

# Attribute Dictionary

Last Modified on 10/22/2022 10:07 am CDT

**Classic View:** System Administration > Custom > Attribute/Dictionary

**Search Terms:** Attribute Dictionary

The Attribute/Dictionary tool shows all core fields and code values created for the current Release Pack version and localized for the applicable district or state.

## Attribute/Dictionary vs. Custom Attributes

The purpose of the Attribute/Dictionary tool is to view all core elements within the application based on the state and district. Locally created elements can be created, viewed and modified in the [Custom Attribute](#) tool.
