

# LDAPS Certificates

Last Modified on 10/22/2022 10:10 am CDT

[Tool Rights](#) | [Upload a Certificate \(LDAPS\)](#) | [Upload a Certificate \(SASL\)](#) | [Replace a Certificate](#) | [Certificate Expiration Warnings](#)

**Classic View:** [System Administration](#) > [User Security](#) > [LDAP Management](#) > [LDAPS Certificates](#)

**Search Term:** [LDAPS Certificates](#)

The LDAPS Certificates tool provides district administrators the ability to store and replace their public key certificates used by LDAP for authentication. By storing certificates in this tool, districts can mitigate the issue of having users locked out of Campus when certificates expire.

Existing certificates that were added by Campus are not impacted by this tool however, once your existing certificate expires, you will need to use this tool to upload a new certificate.

Uploading certificates into Campus is only required if your [LDAP configuration](#) is set to **Use SSL**.

The screenshot shows the 'LDAP Certificate Management' interface. At the top, there is a breadcrumb trail: 'User Management > Settings > LDAP Certificate Management'. Below this is a 'New' button with a plus icon. The main content is a table titled 'Certificates' with the following columns: 'Subject Name', 'type', 'Effective Date', 'Expiration Date', and 'Expires in'. A single row is visible with the following data:

Subject Name	type	Effective Date	Expiration Date	Expires in
infinitecamp...	LDAPS	Tue Jul 17 19:00:00 CDT 2018	Wed Jul 22 07:00:00 CDT 2020	158 Days

## Tool Rights

**PATH:** [System Administration](#) > [User Security](#) > [Users](#) > [Tool Rights](#)

Only users assigned a [Product Security Role](#) of **Student Information System (SIS)** are allowed to use this tool.

## Upload a Certificate (LDAPS)

To upload an LDAP certificate:

1. Click the **New** icon. The Certificate Upload editor will appear.
2. Select **LDAPS**. If you need to upload SASL certificates, see the Upload a Certificate (SASL) section.
3. Click **Choose File**. You will be prompted to locate the certificate on your local hard drive or network.

**You must upload a Cert File (.CER) in Base64 encoded x.509 or DER encoded library x.509 format.**

4. Select the certificate and click **Open**.

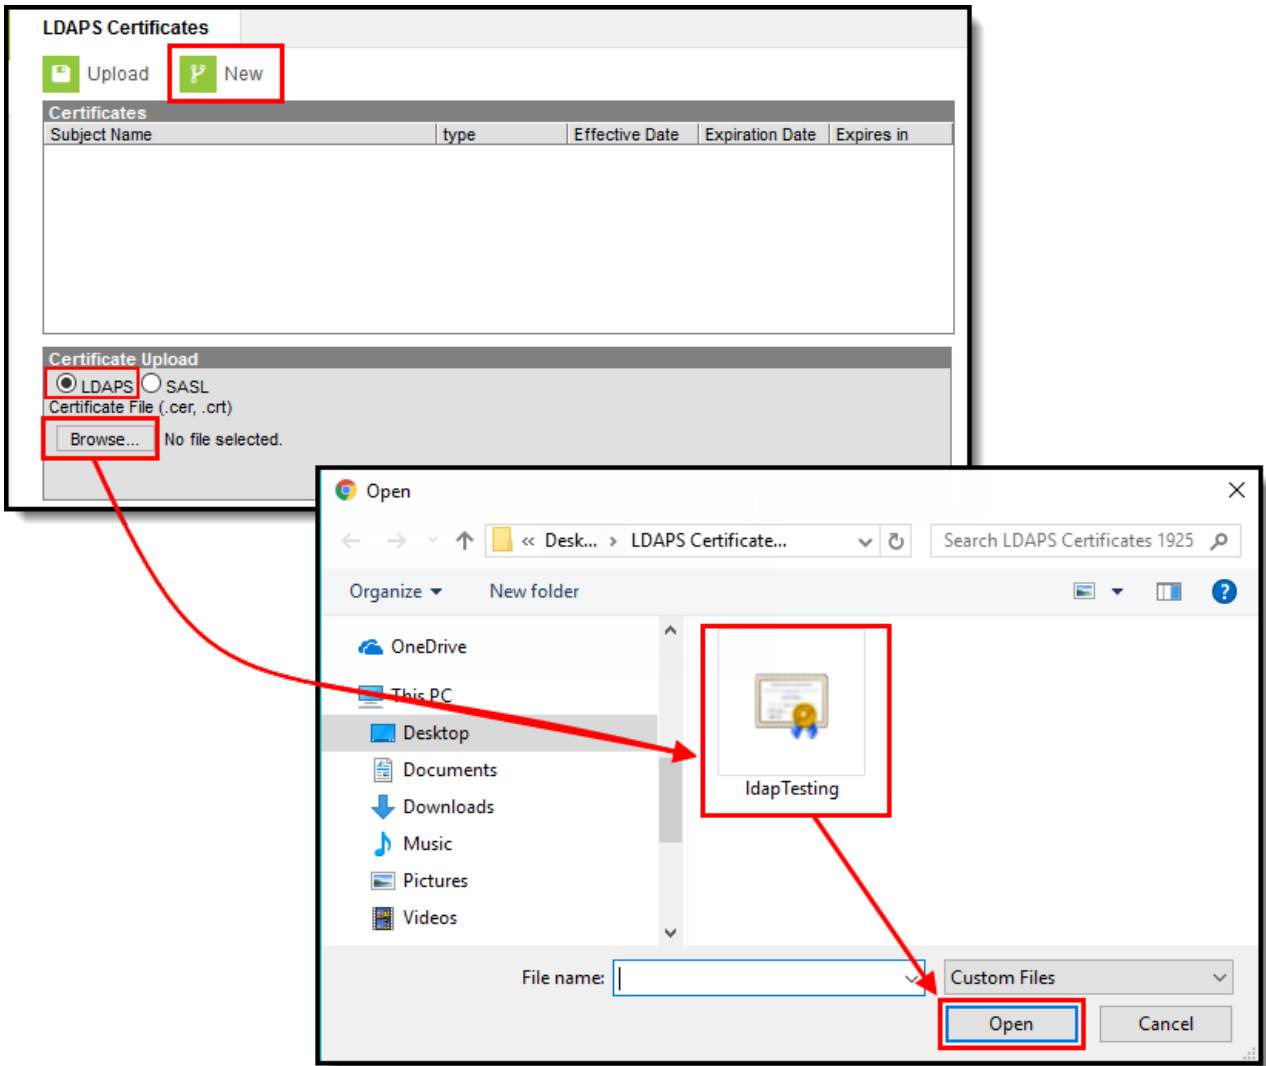

Image 3: Adding the LDAP Certificate

Once the certificate has been selected, it will appear in the Certificate Upload editor next to the Choose file button (Image 4). Click the **Upload** button to upload the certificate to Campus.

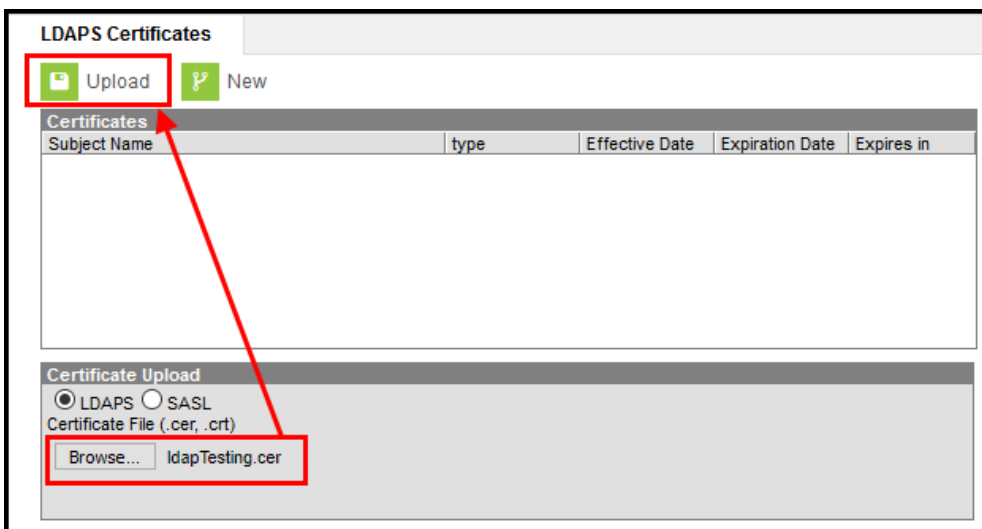

Image 4: Uploading the Certificate

Once the certificate is uploaded into Campus, the certificate's Effective Date, Expiration Date, and number of days until expiration will appear in the Certificates window (Image 5).

Subject Name	Effective Date	Expiration Date	Expires in
infinitecampus.com,O...	Tue Jul 17 19:00:00 CDT 2018	Wed Jul 22 07:00:00 CDT 2020	412 Days

Image 5: Certificate Information

The final step in this process is to navigate to the [LDAP Authentication](#) tool, ensure LDAP is configured properly, and test your LDAP connection by entering a **Test Username** and selecting **Test Configuration**.

If your [LDAP configuration](#) and certificate(s) is valid, a message will appear stating 'Test Configuration Success!'. LDAP is now successfully configured in Campus.

Image 6: Testing Your LDAP Configuration and Certificate

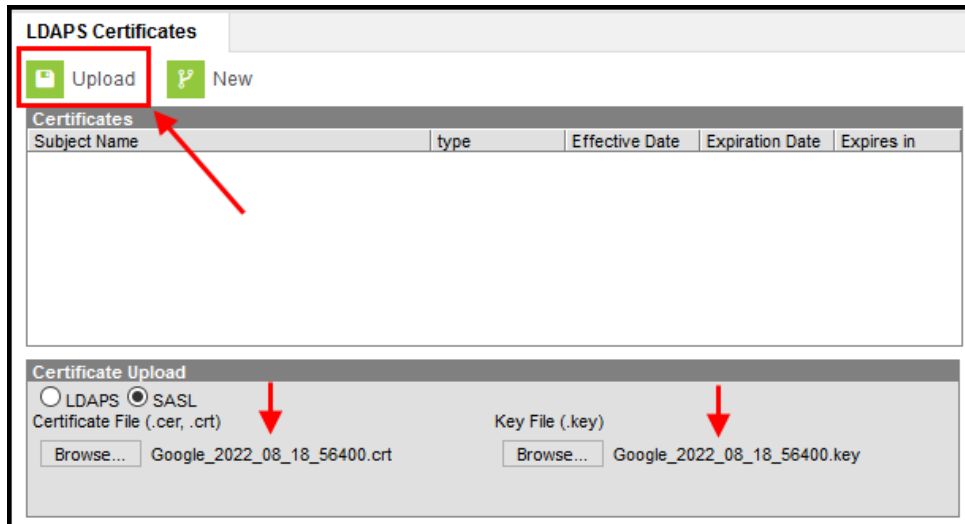

## Upload a Certificate (SASL)

In order to complete this process, you must first have your SASL client configured for Campus and Certificate and Key Files generated by the client. For a step-by-step process on how to configure Google Suite to work with Campus LDAP, see the [LDAP Authentication](#) article.

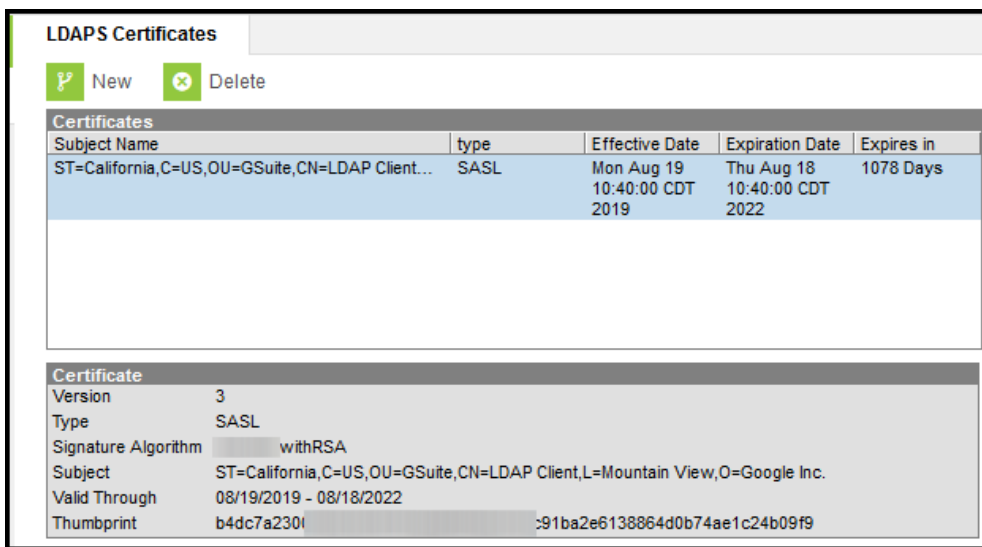

1. Click the **New** icon. The Certificate Upload editor will appear.
2. Select **SASL**.
3. Under Certificate File click **Browse**. You will be prompted to locate the certificate on your locale hard drive or network. This file is provided to you by your SASL client.
4. Under Key File click **Browse**. Locate the key file (likely to be in the same location as the Cert file in Step 3). This file is provided to you by your SASL client.

5. The Certificate File and Key File will now appear as selected in the Certificate Upload editor. Click **Upload**.

6. The files are now uploaded into Campus and appear in the Certificates window.

7. The final step in this process is to navigate to the [LDAP Authentication](#) tool, ensure LDAP is configured properly, and test your LDAP connection by entering a **Test Username** and selecting **Test Configuration**.

If your [LDAP configuration](#) and certificate(s) is valid, a message will appear stating 'Test Configuration Success!'. LDAP is now successfully configured in Campus.

The screenshot displays the LDAP Authentication configuration interface. On the left is a navigation menu with categories like PLP, Portal, Preferences, Resources, Roster, School Choice, Special Ed, Student, Student Portfolio, Surveys, Transportation, and User Security. The 'LDAP Authentication' section is selected. The main area shows a table of LDAP Server Configurations with columns for 'Enabled' and 'Name'. Below this is the 'Configuration Detail' section, which includes fields for LDAP Name, a checkbox to 'Enable this LDAP Configuration', LDAP Server Pool (with fields for Server 1-4 Host and Port), a checkbox for 'Use SSL', Administrator details (Bind User DN and Password), User Search Configuration (Base and Filter), and a Validation section. The Validation section contains a 'Test Username' field with 'testuser' and a 'Test Configuration' button. A red box highlights the Validation section, and a red arrow points to the 'Test Configuration' button.

## Replace a Certificate

If a certificate is close to expiring or simply needs to be replaced, you should do so by selecting the certificate, clicking the **Delete** button, and uploading a new certificate using the steps listed in the [Upload a Certificate](#) section above.

You can upload a new certificate without removing the expiring or expired certificate and Campus will know to use the new valid certificate. However, until you remove the expired certificate from this tool, you will continue to receive in-app and email notifications about the expired certificate.

To prevent a potential lockout of users, it is important to replace certificates prior to their expiration. You will receive warning emails when a certificate is getting close to expiring.

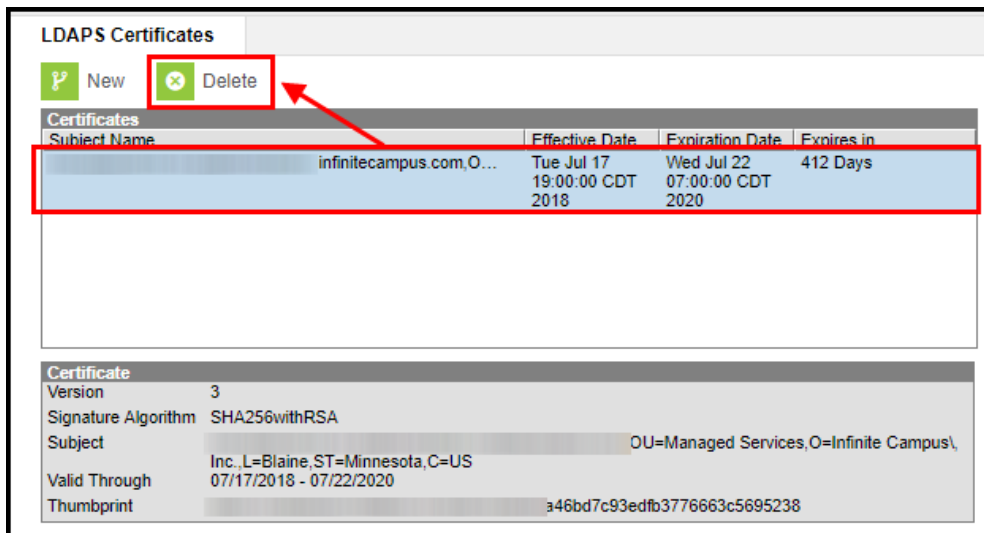

Image 7: Replace an Expired Certificate

## Certificate Expiration Warnings

Email and in-app notification functionality is built into this tool. Users who have access to this tool will receive an email and in-app notification every 3 days when a certificate will expire in less than 30 days.

When a certificate will expire in 10 or less days, this notification will increase to every day until the certificate is replaced. Users will continue to receive daily notifications until the expired certificate is replaced or removed.

You must have proper [Messenger Email Settings](#) established in order to receive email notifications.

You can upload a new certificate without removing the expiring or expired certificate and Campus will know to use the new valid certificate. However, until you remove the expired certificate from this tool, you will continue to receive in-app and email notifications about the expired certificate.
