Search Terms: BIE 30 Day Residential Attendance

The 30 Day Residential Attendance Report is used to monitor residential programs and regulates funding for schools based on the number of students in residence (attendance).

This report should be run for every 30 day period, beginning with the first instructional and attendance day in the residential calendar.

This article includes the following topics:

- [Report Logic](#)
- [Student Requirements](#)
- [Attendance Calculation](#)
- [Generate the Extract](#)
- [Understanding the BIE 30 Day Residential Attendance Report](#)

BIE 30 Day Residential Attendance Report

Report Logic

This report uses the following business logic:

- The report is calculated based on the first instructional/attendance date in the reporting calendar.
- Using the first instructional/attendance date, the report will calculate 30 calendar days after this date to determine the first reporting period, adding another 30 days for each subsequent period.
- Users are only able to select schools/calendars for which they have proper tool and calendar rights.
- Reported data will first alphabetically sort students who are in a residence and then alphabetically filter students who are not in residence.
 - A student in residence is defined as a student who is in attendance for 10 days within each 30 day reporting period.
- Days that are not active school days in the calendar are shaded gray on the report.
- Only students with an enrollment record in a residential calendar are considered for the report.
- Only report one record per student regardless of the number of same-calendar enrollment records the student has in the 30-day reporting range.
 - If a student has multiple enrollments in more than one calendar, one student record is reported per calendar.

Student Requirements

Students must meet the following criteria in order to report:

- Only students enrolled in a BIE regional grade level 01 through 12 are included in the report. Kindergarten, Pre-Kindergarten, early childhood, Face and Baby Face students are excluded from the report.
- Students must have an enrollment record with an Enrollment Type = 1: ISEP (Student Information > General > Enrollments > Bureau of Indian Education Reporting > Enrollment Type) in order to be included in the report.
 - If the student has multiple enrollment records, only those marked as ISEP are reported.
- If a student is not scheduled into the second instructional period, the student is flagged as not eligible on the report since they are not considered present for the midnight bedcheck.
- No Show enrollments are excluded from reporting.

Attendance Calculation

Attendance data is calculated using the following criteria:

- Students who are in residence for at least 10 days during each 30 day calendar day period will be considered to have met residency requirements and are considered for the report.
- For a student to be counted as in residence for a day, the student must be present at the midnight bedcheck (marked in attendance for the second instructional period).
- The report looks at the Attendance module within NASIS to determine whether a student was in residence (attendance) for a specific day.
- Students who are marked absent for the "midnight bedcheck" with an excuse code of Unknown, Unexcused or Excused are not reported as in residence.
- Students who are marked absent with an excuse code of Exempt are included in the report as

in residence and reported on the report for the reporting day.

- The report will distinguish non-official bedchecks based on the non-instructional flag set on the period. The first period marked instructional and any periods flagged as non-instructional will not be reported on.
 - The afterschool bedcheck and midnight bedcheck are the only official bedchecks.
