

Set Course Parameters Used in Scheduling Processes

Last Modified on 11/18/2025 3:13 pm CST

This guide explains how to set course parameters that are used in the scheduling process. The values entered for Terms, Schedules, and Periods must be within the limits of the calendar structure. For example, a value of six for Terms is not a valid entry for a calendar that has four terms.

Course Information -- Scheduling Card

Before you start

Set course parameters that are used in the Scheduling process

1. Enter the number of **Terms, Schedules, and Periods** in which a course section meets. For example, Integrated Math I A course sections meets for two terms, two days of the rotation (or both days when it is an A/B rotation), and for one period each meeting.
2. Enter the number of **Sections to Build**.
3. Enter the maximum number of students who can be placed in a course section the **Max Students** field.

4. Enter the priority that should be assigned to the course in the **Schedule Load Priority** field.
 5. Review any other values selected for the course and modify as needed.
 6. Click the **Save** button when finished.
